# Synopsis

An introductory exposure to programming for toddlers that is as much fun for parents as it is for kids. Follow the protagonist, L, on her whimsical alphabetical programming adventure. L begins as an empty list, appends a boolean friend, and continues to adapt herself and come to understand her surroundings as she engages with and explores a range of programming structures and concepts. NOTE: This book will NOT teach you or your child programming. This book will expose him/her to programming vocabulary and tools. This is a children's book with the goal of stimulating curiosity and interest, not a programming textbook. The focus is on description not explanation. This book is written with the intention that readers with different levels of programming knowledge will come away with and be able to pass along different levels of understanding. Any reader should have no trouble following the text, the events they describe, and the illustrations. On the other hand, to understand the programming components or the explanation of why the events being described are occurring, the reader is expected to have some knowledge of programming.

Harold Sultan is a computer programmer and a father. As a programmer, Harold is experienced with Python. As a father, he has been reading children's books nightly to his children for the better part of a decade. Harold received a PhD in Mathematics from Columbia University and currently lives in Silver Spring, Maryland with his family.

One of the best books I ever purchased for my classroom! The children loved it and their parents raved about it! Everyone should get it.Carole Shulman, M. A. - Jersey City Public School Teacher

Informative and cute story make this a must read!

We are not programmers but want to get our kids started early. We just didn't get it! I think there's a few pages of explanation missing for parents who aren't programmers. Very disappointed.
