HAIGHT ON ART OF INVESTMENT: Casino Table Games

Synopsis

Casinos do not cause losses or winnings. These are the bettor's responsibility. If you don't know that you will win, don't go to a casino. This book debunks "myths" about betting and describes the application of accounting based investment routines. You learn the practice of "synthetic casinos;" the bettor operation of a casino betting table. You learn to "break new ground" in the field of casino investment. Investment is an art that can be learned.

Customer Reviews

This short book debunks many of the myths about "betting systems." A betting system is an accounting routine. Some are good, some are bad. Almost all betting systems in the public domain undershoot the problem. A table game presents a binary problem; either an event will repeat or it will not. A "system" that makes a decision based on only the previous event ("lineal betting" or "stimulus-response") will most likely fail. Art of Investment treats randomness of event delivery as an accounting problem. Bets win and lose almost equally. An investor "handicaps" the flow of money.

People should not gamble
