Research Methods In Psychology For High School Students

Synopsis

High school teachers face common challenges. How do we assist students to cognitively advance before they typically do on their own? How do we maintain a scholarly atmosphere in the classroom and still keep the material relevant to student lives? The purpose of this book is to turn students into investigators of psychology. I want to reframe student ideas that research is an abstraction, and help them come to the realization that a listing of facts is meaningless without understanding their origin. Once students understand the real meaning of psychological information, the facts have a clear application. This book assists students in designing a simple experiment appropriate for the International Baccalaureate psychology curriculum. Students also learn the basics of non-experimental design so they can run simple studies and interpret the meaning of information obtained by the different methods in essays. All teachers can appreciate the problem solving approach to learning about research methods. Scores on all tests formats can improve if students develop a true understanding of methodology. Students remember what they understand!

Jennie Brooks Jamison has been teaching International Baccalaureate and Advanced Placement Psychology since 1986 at St. Petersburg High School, Florida. Jennie is an IB teacher trainer for psychology and examines the internal assessment project and external exams. Jennie lives in St. Petersburg, Florida with her husband and three cats.

Jamison does a solid and concise job on covering research methods in psychology for the higher level students. In particular, this would serve as a good guide for International Baccalaureate students and teachers. The book is filled with good recommendations for class activities.

Great text for High School students taking Psychology. The topics are perfect for students preparing for the IB Psychology examination. The examples are clear and easy to apply to student research projects.
