Book Description: The process of urbanization continues to increase. In order to make fast growing cities more comfortable for living, local authorities are taking actions. One of the popular attempts is to make the urban area “smarter”. As a result, public sector information (PSI) and Open Data are becoming raw material and one of the basics of Smart Cities. The book is based on previous academic research work of the author and discusses the issues of “Smart Cities” and “Smart Mobility” as well as the role of PSI in the European Union. The major aim of this book is to explore how the concept of “Smart Mobility” can be practically implemented and how city data can play its role. The empirical part of the book covers the case studies of three European capitals: London, Berlin and Brussels.

I find this book very helpful for my research on open data. It seems the author put a lot of effort and time to bring theoretical and empirical parts together. I don't want to say it's boring, but if you are looking for entertaining reading on smart cities and other futuristic stuff, then it's definitely not an option, because the book is based on serious research and case studies, which I personally was looking for.

It was amazing book, i love this book a lot of... The book consists of theory on SC, three bright case studies (London, Brussels and Berlin) and really detailed policy analysis part (PSI, open data in the EU). This book is a very helpful and reliable source of information. I can recommend it indeed.

This book was very informative and very well written. The concept of Smart Mobility explained in this book is very interesting and I think the author does a very good job explaining it.

Awesome and informing book! This book deserves five stars because of the useful information it brings to us! I have a research about open data. This book really impressed me. This is really worth reading and recommending!
