Shipping Weight: 5.6 ounces (View shipping rates and policies)

Average Customer Review: 4.6 out of 5 stars 19 customer reviews

Best Sellers Rank: #127,802 in Books (See Top 100 in Books) #48 in [Books > Children's Books > Growing Up & Facts of Life > Health > Diet & Nutrition](#) #104 in [Books > Children's Books > Education & Reference > Science Studies > Anatomy & Physiology](#) #190 in [Books > Children's Books > Growing Up & Facts of Life > Health > Diseases](#)

Age Range: 4 - 8 years

Grade Level: Kindergarten - 4

Customer Reviews

Ages 5-8. One of the classics of the Let's-Read-and-Find-Out Science series, *What Happens to a Hamburger* (1970, 1985) reappears with attractive new illustrations, enhanced in a few places with photos that show body parts such as the epiglottis and the stomach lining. From the silver diner featured on the jacket to the stylized plates of food and clear diagrams of the digestive system within, Miller's digital artwork has a jaunty, retro look. The diner's cheerful waiter serves as the narrator, explaining the process of digestion step-by-step. Carolyn Phelan

Paul Showers wrote twenty books for the Let's-Read-and-Find-Out Science series, including favorites such as *What Happens to a Hamburger?* and *Where Does the Garbage Go?* Mr. Showers

worked on the Detroit Free Press, the New York Herald Tribune, and for thirty years, the Sunday New York Times. Edward Miller has illustrated A Drop of Blood and What Happens to a Hamburger? for the Let's-Read-and-Find-Out Science series. He lives in New York City.

Our 3 year old loves this. He wants it read every day. It is a great anatomy book for little ones that doesn't go into too much detail. The images are very well done and Jr loves to point out the body parts he has learned here to everybody. (For example: "Where are all your strawberries?" "They went in my esophagus and then my stomach. See?" (opens mouth)

My 3 (almost 4) year old LOVES this book - she thinks it's hilarious that food ends up as well, poop. We bought it as another tool in our arsenal of 'get this kid to poop' tools that we've accumulated over the past year or so. Very educational.

This book is about a diner cook who loves to eat healthy food and we find out what happens to that food in this well written and illustrated book by Paul Showers and Edward Miller. There are little experiments and up close photos of digestive organs which can delightfully gross out your child while one reads and learns about this important system of the body. My 4 year old daughter wants to be a doctor when she grows up so I am always on the look out for books about the body. I love all of the "Let's-Read-And-Find-Out Science" books and they have several very good books available regarding how the body works.

My six-year-old daughter loves this book. I have read it to her and she has read it herself numerous times. My only wish is that the book did more to show what happens to unhealthy food once it enters your body. That's part of the reason that I got it for her, so she could understand why it is important to eat in a healthy way (and not gobble up treats that kids at her after-school and day camp offer her).

My first graders loves this!!

Bought to help introduce our 3.5 year old to bodily functions. The text is aimed at more advanced readers but she loves the story and loved learning what happens to food.

A very helpful book.

Kids 4 to 6 will find this an entertaining read with easy to follow illustrations all about favorite foods (with mostly healthy choices) and how their bodies need and use these foods to be healthy & strong...
