I bought this book along with another book in the series, *Sneakiest Uses for Everyday Things*:

How to Make a Boomerang with a Business Card, Convert a Pencil into a Microphone, Make Animated Origami, Turn a TV ... Create Alternative Energy Science Projects, and was severely disappointed when I found out that a majority of the content in this book was EXACTLY the same as in the other book! I felt really cheated. And a lot of the projects aren't very "green," like making animated origami or business-card boomerangs. Rather, they seem like they're just there to pad out the book, which otherwise is pretty sparse. Finally, the projects in it don't seem very fun or useful. I gave it two stars, as opposed to one, because I don't think that it's complete junk, but I recommend purchasing any of the other "Sneaky" books and skipping this one completely.

I thought this book would be cooler than it was. I bought several of the books in this series in hopes that it would inspire lots of fun projects. and maybe it would if I were 10-12yrs old. There's a few neat things here and there but overall not great.

A very interesting read and a great little book. Love the entire series.

A fun read for on and all.

I purchased this book as a Gift to my son, he loves these books. Anything that makes him happy is good with me.

my son-in-law can fix anything and this was a fun book for him to read and use as a practical guide

My nine year old niece likes it, and it looked pretty cool, when i flipped through it. I have not personally done any of the experiments.
